Phototherapy is Bringing Photonics Technology to a New Height

By PIDA

Recently, novel phototherapy devices have been brought to the table due to several major forces that drive market demands, including significant further progress in technology, as well as the obsession with beauty in the world wide.

In terms of advancement in technology, the application of ultraviolet light emitting diode (UV LED) and photochemical oxidation is aimed to provide functions such as sterilization, decolorization, giving out fragrance, and so on. The technology has been put in use in various fields from treating single symptom like acne, jaundice and joint pains, to being used to design automatic sterilization tools that maintain the bacterium more effectively, and to even much more precisely activating brain cells to release dopamine.

According to the U.S. National Institutes of Health, phototherapy is somewhat unique treatment for hyperbilirubinemia of the newborn because of its efficacy to decrease bilirubin level. In the past, commercially available devices are prohibitively expensive and approaches in designing less expensive devices are suboptimal due to reliance on inconsistently available line power and need for bulky, rigid supports that are expensive for distribution. A novel approach moving from fluorescent lamps to LED is to create an inexpensive, compact, freestanding unit that is solar-charged and made with readily available materials.

Bangalore based Wipro GE Healthcare, a joint venture between Wipro and GE's healthcare business, says LED-based phototherapy system cures jaundice in babies in an average of 7.6 hours compared with 10.4 hours using compact fluorescent lamp, or CFL, bulbs. The developing countries desperately need improvements in child health care as they have suffered from a lack of access to public health care, trained personnel and low levels of literacy among pregnant women.

The light source is allegedly inexpensive and sustainable with light source of flexible strips of small, high intensity LED bulbs commercially available materials. These are durable, long lasting, low energy consuming and operable with a photovoltaic battery. Also, the approach specifically aims to optimize design to enable manufacture in target regions. This would dramatically decrease distribution cost and increase community engagement.

A number of research institutions are investigating a new frontier for the activation of brain cell with phototherapy. Washington University School of Medicine and the University of Illinois at Urbana-Champaign have developed tiny devices containing LEDs the size of individual neurons that activate brain cells with light. According to Washington University, the implantable LED light can activate brain cells to release dopamine and is smaller than the eye of a needle, allowing them to identify and map brain circuits involved in complex behaviors related to sleep, depression, addiction, and anxiety.

Taiwan Outstanding Photonics Product Award 2013

"Taiwan Outstanding Photonics Product Award" is the award held by PIDA, which is also the organizer of Photonics Festival in Taiwan. This award aims to recognize the domestic photonics enterprises to develop the "Made in Taiwan" photonics products with innovative technologies and market advantages to enhance the image of Taiwan photonics industry and market competitiveness. This activity has been held for 16 years, and has presented over 150 winning products. Winning enterprises are all representative domestic enterprises with development potential. This is a positive contribution to enhance Taiwan photonics technology innovation and product image.

A new window is open to display a capacity planning report with server details such as: Monitor Name - Undersized / oversized / inactive monitor - the server status. For a certain period of time, if the CPU or Memory Usage of a server is too low, the features assigned to the server will be oversized. For a certain period of time, if the CPU method or the memorial use of a server are very high, the resources destined to the server are subdimensioned. For example, say that CPU's mother's mother's use is very low during most hours of the day. CPU Using - Percentage of the CPU used the use of the memory - percentage of memories used used - The user can add and save notes that appear in the report. Oddly / Machine Monitors with Application Application Manager Planning Report you can also view individual feature use details of a particular monitor for a specific time interval configured by the user. You can set the conditions to be satisfied for a server to be subdimensioned, oversized or idle. If a machine uses the capacity of resources lower than this limit, the machine is overdimensioned. The main objectives of effective capacity management are: make efficient use of existing capacity. The degree to which a virtual machine is subdimensioned is calculated along with the amount of time a machine spends in an underutilized state. A border of use is configured for a specific meter such as CPU or memory. Click on any of the attributes under the CPU or memory usage column to obtain a historic data from all the historic for this specific attribute (relative of the historic use of disc, day-to-day report, report of the day of the 3 and heat management). Click the yes or no under the Undersized / Oversized / IDLE column in the capacity planning table to view a usage summary and 3 usage details report. Capacity planning 3 can be exported in .pdf, Excel, CSV and e-mail e-mail ad odreuqse odal on soir³Ataler ed atsil an edadicapac ed otnemajenalP knil on euqILC .odarugifnoc rolav o euq ronem uo roiam res eved air³AmeM ad e UPC ad oE³AazilitU ed rolav o laug o etnarud opmet O :opmet ed megatnecrop a es soisoico/sodanoisnemidrepus/sodanoisnemidbus oE³Aratse serodivres sO .ohlalart ed sagrac odnatucexe siam oE³Atse oE³An soir³Ausu so .olpmexe rop .sodasu odnes oE³Atse oE³An euq serodivres racifitmedi arap evres esil³ana assE .sep³A³Arugifnoc ravlaS .oE³A³atupmnoc ed sedadissecen sa moc erawdrah ed sotsu so rarilluqe a IT ed sasermpe sa adula edadicapac ed otnemajenalP O .serotinom ed opurg ranoiceles osnepus unem on ocif³acepse serotinom ed opurg mu ranoiceles edop m³Abmat ³Acov .odazillitupus odatse mu me atsag aniuq³Am amu euq opmet o moc otruj odalucac ³A adanoisnemidrepus ³A lautriv aniuq³Am amu euq me uary O .sodazlanosrep sodo³Arep soir³Av erbos soir³Ataler retho edop ³Acov .anig³Ap ad otierid otnac on osnepus unem on soir³Assecen sotubirta ranoiceles edop ³Acov .aid od serotinom so sodot artsom alobat a .oE³Ar³dap roP .ocits³Angaid on odasu sep³A³Arugifnoc raretIA oE³Atob on euqILC .ocits³Angaid on odasu otubirta reuqlaug ravitased arap ³oE³A³avresBO acis³Af air³AmeM ad oE³A³azilitU sanuq³AM sad UPC ad oE³A³azilitU retsulC od air³AmeM ad oE³A³azilitU eruzA retsulC od UPC ad oE³A³azilitU)xinatuN(siautriv sanuq³AM UPC ad oE³A³azilitU ad air³AmeM ad oE³A³azilitU)rosivrepH xirtic(siautriv sanuq³AM air³AmeM ad latot UPC ad oE³A³azilitU)revreS V-repyH(siautriv sanuq³AM edeR ad oE³A³azilitU spbk me S/E ad oE³A³azilitU ocsid od air³AmeM ad oE³A³azilitU UPC ad air³AmeM ad oE³A³azilitU)IXSE/XSE erawMV(siautriv sanuq³AM acis³AF air³AmeM ad oE³A³azilitU UPC ad latot oE³A³azilitU rosvrepiH xirtic acis³AF air³AmeM ad oE³A³azilitU UPC ad latot oE³A³azilitU V-repyH serodivres spbk me edeR ad oE³A³azilitU spbk me ocsid od oE³A³azilitU air³AmeM ad oE³A³azilitU UPC ad oE³A³azilitU siXSE/XSE eraWMV air³AmeM ad oE³A³azilitU UPC ad oE³A³azilitU otubirtA ed serodivres rotinom ed opit Minimization of the waste of computation resources.
